Enterprise SharePoint Intranet Dashboard Development

Project Overview

Designed and implemented a modern intranet portal using Microsoft SharePoint to centralize organizational data, improve internal communication, and provide real-time business insights through an interactive and user-friendly dashboard.

Key Contributions

- Developed a personalized homepage with dynamic welcome section
- Implemented multi-location world clock for global teams
- Created a news and content management section with cards
- Built Sales per Month dashboard with visual charts
- Designed Time Publication module for scheduled content tracking
- Developed event tracking section
- Created quick access navigation (Leave, Expenses, Policies, etc.)

Tools & Technologies

- Microsoft SharePoint (Modern Experience)
- SharePoint Web Parts
- JSON Formatting

Challenges & Solutions

Challenge: Information was scattered across manual systems (whiteboards, documents)
Solution: Centralized all data into a single SharePoint intranet dashboard

Challenge: Default SharePoint UI lacked engagement
Solution: Designed structured, clean, and visually appealing interface

Results & Impact

- Improved internal communication
- Centralized business data
- Reduced manual tracking
- Enhanced decision-making through dashboards

Note:
Due to access restrictions, only a sample snapshot of the implemented homepage is included.
