Case Management Automation

The Overview

Legal and operations teams opened cases manually and created SharePoint sites by hand. Emails and documents were scattered. A complete lifecycle automation was built from opening to archiving.

The Challenges

- Manual creation of case sites
- Time consuming asset movement
- No proper closure process

The Solution

- Power Apps form to capture case details
- Automatic SharePoint site provisioning
- Email migration to case folder
- Archive workflow on closure

Solution Highlights

- End- to- end automation
- Permission control

The Results

- Cases created within minutes
- Central audit trail
- Secure archival
