Issue Tracker Application – Case Study

The Overview

A centralized issue tracking system was implemented to manage project tasks, issues, and deliverables across teams and projects in a structured and transparent way.

The Challenges

- Issues tracked through scattered emails
- No centralized tracking system
- Limited visibility of task and issue status
- Difficult collaboration across teams

The Solution

- Centralized issue tracking application
- Linking issues with projects and companies
- Support for attachments and comments
- Dynamic filtering and search capabilities

Solution Highlights

- Dashboard-based issue tracking
- Clear ownership assignment
- Real-time status updates

The Results

- Improved collaboration between teams
- Faster issue resolution
- Better accountability and ownership
- Organized project and issue management
